

IRS Guidance on Tax Credit for Purchase of Biomass Stoves

On January 1, 2011, the Internal Revenue Service (IRS) should issued its guidance for the 10% consumer tax credit (up to \$300) for the purchase and installation of a 75-percent efficient biomass-burning stove.

Hestia Heating Products Model HHP 2 has been independently tested by Omni Test Labs for safety and verification of eligibility for the tax credit. Attached is a copy of the certificate of eligibility to be given to consumers when they purchase our product.

Overall, this tax credit is for the purchase of and not for instillation of the biomass stove. We see this as an aid to the industry and will clearly increase demand for Hestia Heating Products appliances. **Please have consumers consult their tax advisor if they have ANY questions about how this measure applies to their particular circumstance or any previous credits used that may void this offer.**

Thanks,

John Madsen
